

Interview Questions — Career Orientation & Flutter Ecosystem

Total Questions: 30

1. What is the difference between native, hybrid, and cross-platform mobile app development?

Hint: Focus on how the codebase relates to platforms like Android and iOS.

2. Why have many startups and enterprises chosen Flutter for their mobile app projects?

Hint: Consider aspects like speed, cost, and code reusability.

3. Describe a situation where using Flutter would be more beneficial than building separate native apps.
-

4. What is a widget in Flutter, and why is it central to building UIs?
-

5. Explain the concept of widget hierarchy in Flutter with a simple example, such as a profile screen.

Hint: Think about how widgets are nested inside each other.

6. How would you quickly create a basic profile screen in Flutter? Mention the main widgets you would use.

Hint: Consider layout and text/image widgets.

7. In a Flutter app, what is the purpose of the build() method?
-

8. How do changes in the widget tree affect the UI in Flutter?
-

9. What is the role of a Scaffold widget in a Flutter app?

Hint: Think about what it provides to a typical screen.

10. What is the difference between a Column and a Row widget in Flutter?
-

11. How would you modify a Flutter screen to add a button below a text widget?

Hint: Think about widget nesting and layout arrangement.

12. What are the typical roles and team structures involved in mobile app development in the industry?

Hint: Consider developers, designers, testers, and backend.

13. How do mobile developers interact with designers and backend teams during app development?

14. As a junior Flutter developer, what kinds of tasks might you be assigned in your first few months on the job?

Hint: Focus on features, bug fixes, and UI tasks.

15. After reviewing a real Flutter job description, what are some skills and responsibilities commonly expected from freshers?

16. Walk me through how you would plan and deliver a new feature for a Flutter app as part of a team.

17. What is the difference between a StatelessWidget and a StatefulWidget in Flutter?

Hint: Think about whether the UI can change after it is built.

18. If you want to update the UI in response to a button press, which type of widget would you use and why?

19. How does Flutter render widgets to the screen? Briefly describe the process.

20. Given this widget structure: Scaffold > Column > Text > Button, what happens if you move the Button above the Text?

Hint: Consider the order of appearance in the UI.

21. If you notice that a widget is not updating as expected when data changes, what steps would you take to troubleshoot the issue?

22. Describe how you would use the hot reload feature during Flutter development and why it is useful.

23. How would you explain the concept of 'everything is a widget' to someone new to Flutter?

24. Suppose you want to create a reusable button style across several screens in a Flutter app. How would you achieve this?

25. How can using AI tools like ChatGPT or GitHub Copilot help you when building or debugging a Flutter UI? What should you check before using the code they suggest?

Hint: Think about code suggestions and the importance of testing or reviewing the output.

26. Imagine you are using an AI image generator to create assets for your Flutter app. What are the benefits and what must you still consider before adding them to your project?

27. In a real-world Flutter project, how would you coordinate changes between the frontend Flutter code and a backend API?

Hint: Think about communication, versioning, and teamwork.

28. What challenges might arise when maintaining a Flutter app in production, and how would you approach solving them?

29. If a designer wants to change the layout of a screen you built in Flutter, how would you update the widget tree to reflect those changes?

30. Explain how widget nesting and the `build()` method work together to create dynamic UIs in Flutter.
